

Endermologie

Using the LPG 'Cellu M6 KMi' system

The Epsom Skin Clinic offers the first FDA approved treatment for cellulite and body contouring. This procedure is performed using the 'Cellu M6 KMi' system under the supervision of our GP dermatologist, and is a special form of deep tissue massage that uses a machine to smooth the contours of the body fat.

How does it work?

Endermologie is nonsurgical and noninvasive. It involves the use of a motorised hand piece with two adjustable rollers and controlled suction, which creates a symmetrical skinfold. The skin gently folds and unfolds under the continuous action of the rollers allowing for smooth and regulated deep tissue mobilisation. As the viscosity of the subcutaneous fat layer decreases, blood flow and lymphatic drainage increase, facilitating the elimination of excess fluid and metabolites, while improving overall cellular function.

Does it hurt?

No, clients find this treatment much like a very advanced massage and incredibly relaxing.

How many treatments do I need?

A course of between 14 to 20 treatments, 2 a week is normally recommended, this is dependant on the individual requirements of the client. Maintenance treatments once a month will increase and maintain the results further.

How long does it take?

Treatment sessions take approximately 30 minutes.

How much does it cost?

Consultation and Trial	35
Session	65
Course of 5	285
Course of 10	500
Course of 20	800
