

Permanent Hair Reduction

Using state of the art laser and IPL systems

The Epsom Skin Clinic uses the most advanced FDA cleared laser and Intense Pulsed Light technology for permanent hair reduction, safely and effectively treating all ethnic origins and skin types including tanned skin. A consultation and test patch will be necessary before treatment.

How does it work?

Energy from the Laser and IPL machines is absorbed by the pigment in the hair follicle while your hair is in its anagen, or active phase of growth. The light is converted into heat, causing thermal damage to the follicle without harming the surrounding tissue. Hair re-growth is impeded in the damaged follicle.

How many treatments do I need?

Only 30% or less of your hair may be in the active phase at any one time depending on the body area. Thus, a series of treatments will be required to achieve the long term improvement you desire. These treatments are spaced approximately 4 - 6 weeks apart, based on hair growth cycles. Our extensive experience tells us that you can expect to need from 3 - 8 treatments (4 - 6 is average) to each treatment area for long lasting optimal results.

How long does it take?

Treatments take between 15 and 45 minutes depending on the area being treated. Prior to laser treatment a topical anaesthetic is used to numb the area and will require an additional 30 minutes. IPL does not require topical anaesthetic.

How permanent is hair removal?

The average patient sees a 48% reduction in hair growth after three treatments and up to an 80% lasting reduction after 6 to 8 treatments but results will vary from person to person. After you have completed a series of 4 to 6 treatments, any remaining hair will usually be finer and lighter in colour. Most patients require one or two touch-up treatments per year.

How much does it cost?

Glabella	£25
Chin	£35
Upper lip	£35
Ears	£40
Nipple Area	£40
Nose	£40
Abdomen	£50
