

Medical Microdermabrasion

Using the Derma Genesis M2 System

The Epsom Skin Clinic uses advanced medical technology to perform this deep exfoliating and skin resurfacing treatment. It can safely and effectively treat all ethnic origins and skin types including tanned skin. Different techniques are used to treat acne scarring, fine lines, oily skin and hyper pigmentation. This procedure is performed following a skin assessment by one of our aesthetic therapists who assess each client before and after any treatment or treatment course.

How does it work?

A highly controlled flow of fine medical grade crystals remove the dead outermost layer of skin. This process reveals the new living skin cells that are soft, smooth and receptive to nutrients.

Does it hurt?

No, most clients tolerate the treatment very well with most finding it very relaxing. The sensation experienced is slightly scratchy and warming but this disappears very quickly once treatment is finished.

How many treatments do I need?

A course of between 3 & 6 treatments is recommended depending on each client's individual skin condition. Maintenance treatments once a month or combining with a skin peel treatment may be advised to augment the results further.

How long does it take?

Treatment sessions take approximately 30 minutes and light makeup can be applied to treated skin about an hour after treatment.

How much does it cost?

Hands	£30	£75	£135
Face	£65	£160	£295
Back or Leg	£100	£250	£475
Microderma Peel Face	£100	£250	£475
