

Medical Microdermabrasion

Using the Derma Genesis M2 System

The Epsom Skin Clinic uses advanced medical technology to perform this deep exfoliating and skin resurfacing treatment. It can safely and effectively treat all ethnic origins and skin types including tanned skin. This procedure is performed under the supervision of our GP dermatologist who assesses each client before and after any treatment or treatment course.

How does it work?

A highly controlled flow of fine, medical grade crystals remove the dead, outermost layer of skin. This process reveals the new, living skin cells that are soft, smooth and receptive to nutrients.

Does it hurt?

No, most clients tolerate the treatment very well with most finding it very relaxing. The sensation experienced is slightly scratchy and warming but this disappears very quickly once treatment is finished.

How many treatments do I need?

A course of between 3 and 6 treatments is recommended depending on each client's individual skin condition. Maintenance treatments once a month and the use of the AgeraRx Medical skin care range is advised to augment the results further.

How long does it take?

Treatment sessions take approximately 30 minutes and makeup can be applied to treated skin immediately after treatment.

How much does it cost?

Face	65	160	295
Back	100	250	470
	Session	Course of 3	Course of 6
