

# Reduce and Eliminate Shaving Bumps

## Using the Laserscope Lyrai™ Laser System

The Epsom Skin Clinic provides the most advanced FDA cleared laser technology for the reduction and elimination of Pseudo Folliculitis (PF), more commonly known as shaving bumps. These may appear on any commonly shaved area of your body. This advanced technology allows us to treat all ethnic groups and skin types safely and effectively. Dr Paul Steventon supervises all laser treatments for the reduction and elimination of shaving bumps.

### How does it work?

Laser light is absorbed by pigment in actively growing hair, damaging the hair follicle and thus, hair re-growth is impeded, reducing and eliminating the bumps caused by ingrown hairs. The average patient sees at least a 75% short-term reduction of shaving bumps within 2 weeks after just one or two treatments. One or two annual maintenance up treatments may be required after completing the initial treatment course.

### How many treatments will I need?

Only a portion of your hair is in the active growth phase at the time of treatment. Therefore, a series of treatments will be required to achieve the long-term improvement you desire. These treatments are spaced approximately 4 - 6 weeks apart, based on hair growth cycles. Long-term improvement is seen after completing a course of 4 to 6 treatments.

### How long does it take?

Sessions to treat the neck or bikini area can take as little as 15 minutes, while a full beard and neck may take 45 minutes. If topical anesthetic is used to numb the area an additional 30 - 45 minutes will be required.

### How much does it cost?

	£70	£175	£320
Side Of Cheeks	£70	£175	£320
Full Face, Inc Upperlip, Chin And Side Of Cheeks	£120	£300	£580
Beard (Facial)	£80	£200	£380
Neck (Beard)	£80	£200	£380
Full Beard	£120	£300	£580
Under Arm	£80	£200	£380
Under Arm And Bikini Line	£130	£320	£600
Bikini Line	£80	£200	£380
